OpAMP provider reads bootstrap YAML
- sumologic
- opamp

OpAMP provider glob loads from opamp
remote_configuration_directory declared in the
bootstrap YAML

OpAMP extension glob loads from opamp remote_configuration_directory

OpAMP extension agent creates websocket connection
to the OpAMP server. Uses Sumo credentials managed
by the sumologic extension.

HTTP Upgrade 200 Success

OpAMP agent reports effective configuration **ONLY**
derived from remote_configuration_directory, a map of
YAML file names to their configmap contents.

If OpAMP agent effective configuration differs from the
desired remote configuration, send the agent an
AgentRemoteConfig message.

OpAMP extension replaces the contents of
remote_configuration_directory with that of the received
AgentRemoteConfig message.

OpAMP agent sends a RemoteConfigStatus.

OpAMP extension signals its own process with a
SIGHUP to trigger a collector reload.

Compare agent effective configuration with the desired
remote configuration.
